

## Lisa O'Neill

### AV Requirements for your upcoming event

- Stage – size appropriate to your event
- Data projector with screen – VGA or HDMI connection capability
- Handheld mic or nude headset mic (see picture)
- Lisa uses a Mac computer and will operate this from the stage. Lisa will supply her own clicker and VGA or HDMI adapter for connecting to the projector
- Plinth or table for lap top
- Audio jack to connect to MAC for audio from presentation
- Stage lighting to ensure Lisa can be seen from all areas of the room – talk to your AV provider to ensure lighting doesn't impact the quality of the on-screen visuals
- Table on stage with water bottle or jug with glass (can be the same table that is used for the lap top)

Lisa always operates from her own computer on stage, and does not provide her presentation prior to the event for a number of reasons. Mostly due to the risk of breaking embedded fonts, links and videos.

If you have any questions or concerns, please get in touch.

Many thanks
